# 1 Introduction

## 2 Symmetric Encryption

Secret key cryptography involves the use of a single key. Given a message (the plaintext) and the key, encryption produces unintelligible data which is about the same length as the plaintext was.

Secret key cryptography is sometimes referred to as **conventional cryptography** or **symmetric cryptography**.

Secret key encryption schemes require that both the party that does the encryption and the party that does the decryption share a secret key. We will discuss two types of secret key encryption schemes:

- **Stream Ciphers:** This uses the key as a seed for a pseudorandom number generator, produces a stream of pseudorandom bits, and  $\oplus$ s (bitwise exclusive ors) that stream with the data. Since  $\oplus$  is its own inverse, the same computation performs both encryption and decryption.
- **Block Ciphers:** This takes as input a secret key and a plaintext block of fixed size (older ciphers used 64-bit blocks, modern ciphers use 128-bit blocks). It produces a ciphertext block the same size as the plaintext block. To encrypt messages larger than the blocksize, the block cipher is used iteratively with algorithms called *modes of operation*. A block cipher also has a decryption operation that does the reverse computation.

### 2.1 Stream Ciphers

Idea: try to simulate one-time pad

1. Define a secret key (seed)
2. Using the seed, generate a byte stream (A.K.A. **Keystream**): i-th byte is a function of:
  - (a) only the key (*synchronous* stream cipher)
  - (b) both the key and first i-1 bytes of cipher text (*asynchronous* stream cipher)
3. Obtain the ciphertext by bitwise XORing plaintext and keystream

## **2.2 Stream Ciphers in practice**

### **2.2.1 A5/1**

### **2.2.2 RC-4**

## **2.3 Block Ciphers**

### **3 Data Integrity**

## **4 Public Key Cryptography**

## **5 Digital Signatures**

## **6 Cryptographically Secure Pseudo-Random Number Generators**

## **7 Authentication**

## 8 Secret Sharing

## **9 Access Control**

## **10 Secure Protocols**

## **11    Firewalls**

## **12 Email Security**

## **13 Web Technologies**

## **14 Web Security**

## **15 Web Tracking**
